DETAILED ACTION

This application has been examined. This action is response to a preliminary amendment 1. filed February 15, 2002. Claims 1-6 and 8-16 have been canceled. In the preliminary applicants discuss a restriction requirement which includes inventions I-XI and state that the present invention claims are "... generally directed to the invention of group X...". To expedite prosecution of the instant application, applicants are asked to provide a copy of that restriction requirement in response to this Office action. Informational disclosure documents (3) have been filed August 31, 2002, December 3, 2002, and April 4, 2003. In view of the extensive number of citations and the number of copending and/or related applications cited in the specification, applicants are asked to provide a discussion of the prior art deemed most relevant to the elected invention of Group X. Applicants are asked to update status of pending applications (Patent numbers 6,568,471; 6,328,113; 6,497,289; 6,823,937, 6,575,240 and serial number 09/510,913) cited in the instant application specification and further to maintain a clear line of demarcation between the subject matter of applicants' prior patents/application and the instant application. Claims 7 and 17-30 are pending. In view of the cancellation of claims drawn to the remaining inventions ten inventions, the restriction is made FINAL. An action on the merits of method claims 7 and 17-30 (dependent thereon and independent claim 30) is included in this Office action.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have

Application/Control Number: 10/076,660 Page 3

Art Unit: 3753

been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).
- 4. The factual inquiries set forth in *Graham v. John Deere Co., 148 USPQ 459*, that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or unobviousness.
- Claims 7 and 17-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stout et al (Figure 4A0. Note the disclosure of a "ball plug" 38 which when disposed on seat 40 in the inlet of the "apparatus for controlling the flow of fluidic materials" blocks the inlet of the throat passage to allow injected fluid pressure in tubing chamber to increase (column 5, lines 1+) and control piston. A screen 44 to control debris is disclosed. Predetermined hydraulic actuation pressures (which would be within the ranges recited) are disclosed in column 8, lines 21+. The passage in the apparatus is blocked and unblocked in response to shearing of the "piston" 90 "shear pin" 136. The rate would be controlled by the characteristics of the shear pin selected. It would have been obvious to one of ordinary skill in the art to operate the apparatus of Stout et al by the recited method steps.

Art Unit: 3753

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. Michael Chambers whose telephone number is 571-272-4908. The examiner can normally be reached on Mon-Thur. 6:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on 571-272-4930. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
